

The seminar series

Viking Phenomena: current research on late Iron Age Scandinavia

Introducing

Peter Pentz

Curator at the National Museum of Denmark

Date: 25th of April 2018

Time: 15 – 17

Place: Uppsala/Eng 2-1024 – Campus Gotland A30, Uppsalarummet

To get to the other side...?

The Raving Enge bridge and other Viking Age bridges in Southern Scandinavia.

A bridge is basically a structure built to span physical obstacles. King Harald Blåtand's more than 750 meters long bridge at Raving Enge in Jutland spanning over Vejle Ådal was built in 980/981. In spite of the resources spent, the scope of the meaning remains uncertain. The paper will survey the Raving bridge in particular, but also review other Viking Age bridges of Denmark.

Welcome!

Neil, John & Charlotte
